

DATTER.AI

We know which data matters.

Selection engine · max cut @ quality
floor · **Hands Off London 2026**

The \$100B+ AI Waste Tax

Globally, \$26B is wasted annually on "Dark Data" storage, and billions more on unproductive GPU compute. Move from "Is the data clean?" to "Is this data worth AI spend?"

Cost Breakdown (Per 100TB)

The Cost Multiplier Effect

"We stop the spend before the first GPU is spun up."

- 85% is "Dark Data"
- 20-30% Cloud Spend Wasted

Current tools start too late

Time-Based Filtering

Blindly deleting "old" data to save space, regardless of its informational value.

Manual Categories

Engineers manually sort pointers and folders based on rigid, human-defined rules.

Agentic AI Limitations

Agents execute tasks efficiently but only follow human logic. They don't judge data quality.

The Input Compound

Datter is a selection
preserves it — eval-

num token cut that

Where Useful Data Lives

How Datter AI Sees Your Data

Market Opportunity: Pre-Embedding RAG Waste

Every RAG team embeds full PDF libraries before knowing what their bot needs

TAM (Total Addressable Market)

↑ Pre-embed spend at risk

~\$45B+

Global AI data ingestion, embedding & prep spend.
Before downstream training & labeling compounds.

SAM (Serviceable Addressable Market)

RAG wedge

~\$8B

Pre-embedding corpus optimisation for RAG + fine-tuning teams.
Proactive input gate — not post-hoc observability.

SOM (Serviceable Obtainable Market)

\$120 Million

Year 1–3 wedge: RAG teams, regulated KB, ML labs.

 RAG Team

 Regulated KB

 ML Labs

Founders

Co-Founder & CEO

Tuntathorn Chursuk

PhD in Machine Learning, Imperial College London

Data-centric product and ML infrastructure, bridging research innovation to enterprise ROI.

Machine Learning

Data Infrastructure

Product Strategy

Co-Founder & Chief Scientist

Adisorn Panasawatwong

PhD, Max Planck Institute for the Physics of Complex Systems

Specialist in complex systems and data distillation, improving model accuracy of the product.

We know
which data
matters.

datter.ai

Appendix

Throw data in. Know what matters.

API & Platform

Upload PDF corpora + eval questions. Run hands-off audit before embedding into your vector store.

Actionable Outputs

Receive optimised corpus zip, audit manifest, and max safe cut @ floor report — eval-proven vs random.

Up to 50%

max safe token cut @ 90% floor (Gov demo)

api_usage_example.py

```
1  import datter
2
3  # Initialize client
4  client = datter.Client("API_KEY")
5
6  # Audit PDF corpus before
   embed
7  result = client.analyze(
8      source="gov_handbook.pdf",
        "Managin
9      corpus="Managin
   Public Money.pdf"
10 )
11
12 print(result.summary)
```

Quality-Floor Pricing — You Pick the Floor, We Find the Max Cut

Standard

90% understanding floor

Designed for

RAG teams & support bots

- ✓ \$/M tokens analysed
- ✓ Max safe cut @ floor report
- ✓ Eval proof vs random cut
- ✓ Free Audit wedge (local PLG)

Assured

95% understanding floor

Regulated

internal KB buyers

- ✓ \$/project/month
- ✓ Audit manifest + export
- ✓ Quality-floor SLA headroom
- ✓ Pipeline integration (Airflow)

Governed

99% understanding floor

Enterprise + VPC

Banks & audit trail required

- ✓ On-premise deployment
- ✓ Immutable audit trail
- ✓ Dedicated solution architect
- ✓ SLA guarantees

Typical customer saves 3–5x downstream waste vs subscription at same quality floor

We charge for **max safe cut @ your floor**, not blind deletion.

Financial Trajectory

Year 1 Goal

**5 design-partner
RAG pilots → 5
paying teams**

Standard tier (\$M) analysed) on scoped corpora. Pilot → paid conversion.

Target Revenue

\$0–\$500k

**UNIT
ECONOMICS**

Every **\$1** Spent on Datter Saves **\$5-\$15** in Downstream Waste

Competitive Landscape: Where Datter AI Operates

Others manage data or models. **Datter AI decides whether data is worth managing at all.**
